PATIENT INFORMATION

Improve Function. Restore Purpose.

TeslaMax® Therapy for Neuropathic Pain

Drug-free electrical stimulation for numbness, tingling, and burning nerve pain

Peripheral neuropathy can cause burning, tingling, numbness, and weakness, most often in the feet and legs. TeslaMax is a high-voltage, low-amperage AC neuromuscular electrical stimulator. It produces deep, comfortable muscle contractions designed to improve local circulation and reduce fluid buildup in the affected areas, supporting the body's natural healing. [1] At HEAG, TeslaMax is part of a complete, physician-directed neuropathy care plan.

Drug-Free
No added medications

Non-Invasive
No needles or surgery

Comfortable
Gentle, adjustable stimulation

Who may benefit

- Diabetic peripheral neuropathy
- Chemotherapy-related neuropathy
- Neuropathy with no known cause
- Burning, tingling, or numb feet and legs
- Balance problems caused by neuropathy
- Muscle weakness or poor circulation in the legs

What to expect

1. **Evaluation.** Your physician confirms your diagnosis and checks that TeslaMax is safe for you.
2. **Electrode placement.** Our staff places soft pads on your legs, feet, or back.
3. **Treatment session.** Stimulation increases gradually to a comfortable level. Sessions usually last 30 to 45 minutes. [2]
4. **Progress checks.** We track your symptoms and adjust your plan over a series of visits.

Important safety information

Results vary from patient to patient, and TeslaMax does not cure neuropathy. Electrical stimulation may not be appropriate if you have a pacemaker, defibrillator, or other implanted electronic device; are pregnant; have a known blood clot; or have broken or irritated skin where the pads would be placed. Tell your physician about all medical conditions before starting treatment.
